

## **ABSTRACT OF THE DISCLOSURE**

It is an object of the invention to improve an outer appearance and the contrast of an organic EL display panel. An organic EL display panel includes a cover which has a transparency and is provided for enclosing organic EL device(s) formed on a substrate having a transparency. The display panel has transmission vision preventing means formed by providing at least colored portions in the cover. By virtue of non-luminescent areas located on the outside of the luminescent area, it is possible to prevent a poor outer appearance caused by the interior of the display panel visible from the outside of the panel.
